PROJECT DEVELOPMENT PHASE

SPRINT-III

Date	19 November 2022
Team ID	PNT2022TMID38246
Project Name	Natural Disaster Intensity Analysis and Classification using Artificial Intelligence

DETECTION AND ANALYSIS OF DATA:

After Testing and Training the model, data which given in dataset are analysed and visualised effectively to detect the Disaster Type. Using webcam, it can capture image or video stream of Disaster, to detect and analyse the type of Disaster.

MODEL BUILDING:

Building a Model with web application named "FLASK", model building process consist several steps like,

- Import the model building Libraries
- Initializing the model

- Adding CNN Layers
- Adding Hidden Layer
- Adding Output Layer
- Configure the Learning Process
- Training and testing the model

all the above processes are done and saved in a model.

```
In [1]: import numpy as np#used for numerical analysis import tensorflow #open source used for both ML and DL for computation from tensorflow.keras.models import Sequential #it is a plain stack of layers from tensorflow.keras import layers #A layer consists of a tensor-in tensor-out computation function #Dense layer is the regular deeply connected neural network layer from tensorflow.keras.layers import Dense,Flatten #form tensorflow.keras.layers import Conv2D,MaxPooling2D #Convolutional layer #MaxPooling2D-for downsampling the image from keras.preprocessing.image import ImageDataGenerator

Using Tensorflow backend.
